ASSESSMENT TOOL 1 – ANALYTICAL PROBLEM SOLVING

Course Code:	CSA0309	Course Title:	Data Structures
CO Assessed:	CO2 – Manipulation (BL3, BL4)	Assessment:	Assessment Tool 1 – Analytical Problem Solving
Weightage:	30% of CIA	Total Marks:	100
CO2 Statement:	Implement linear data structures such as stacks, queues, and linked lists, and analyze the efficiency of linear and binary search techniques.		
Student Name:	M. Mary Sharlin	Reg. No.:	192511330
Section / Batch:	BE CSE	Date:	17/07/2026

Code of Conduct

I M. Mary Sharlin (192511330) (Name / Reg No)

certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: M. Mary Sharlin

Instructions

- This test contains 80 Analytical problem-solving questions. Total: 100 Marks.
- When a student answer using an Analytical problem-solving, in evaluation the answer should be with following five requirements: Understanding of problem, select appropriate data structure, Design the solution, analyze, Clarity of representation.
- Each student should write 2 questions. No negative marking. Unanswered questions carry zero marks.
- No DTP printouts or electronic devices permitted. They should provide written materials.

Section / Topic	Focus	Q Nos	Marks
Linked Data Structure, Search Data Structure	List Operations, Binary Search	1	50
Stack Data Structure, Queue Data Structures	Stack Notations, Priority Queue	2	50
GRAND TOTAL:		100 Marks	

D. Write an algorithm called Find-largest that find the largest that finds the largest number in an array using a divide-and-conquer strategy.

Algorithm:-

1. If $low = high$, return $A[low]$.
2. Find $mid = (low + high) / 2$
3. $left = \text{Find-largest}(A, low, mid)$.
4. $right = \text{Find-largest}(A, mid + 1, high)$.
5. If $left > right$
 return left
 Else
 return right.
6. Stop

Ex:-

For;

$A = [12, 45, 7, 23, 89, 34]$

Divide:-

$[12, 45, 7]$

$[23, 89, 34]$

Maximum of left part = 45

Maximum of right part = 89

$\therefore$ largest = 89 ; Time Complexity : $O(n)$

2). Analyse how to print all the prime integers present in the Single linked list having a list of

24 → 21 → 57 → 31 → 12 → 47 → 7 → 38 →

given list:-

24 → 21 → 57 → 31 → 12 → 47 → 7 → 38 → NULL

Analysis:-

24 → Not Prime

21 → Not Prime

57 → Not Prime

31 → Prime

12 → Not Prime

47 → Prime

7 → Prime

38 → Not Prime

Algorithm:-

1. Set temp = head
2. Repeat while temp ≠ NULL
3. Set n = temp → data
4. If $n > 1$, check whether n is divisible by any number from 2 to $\sqrt{n}$
5. If no divisor is found, print n.

6. Set $temp = temp \rightarrow next$

7. Stop.

Final Output :

31 47 7

Time Complexity : $O(n\sqrt{n})$

~~Wrong~~

Rubrics for Calculation

Criteria	Weightage	Level 4 - Exemplary	Level 3 - Proficient	Level 2 - Developing	Level 1 - Beginning
Problem Understanding	20	Demonstrates complete and precise understanding; identifies all constraints and edge cases	Shows clear understanding with minor gaps	Partial understanding; misses some constraints	Misinterprets problem or lacks clarity
Data Structure Selection	20	Selects optimal data structure with strong justification and comparison	Selects appropriate structure with reasonable justification	Selects somewhat suitable structure with weak reasoning	Incorrect or no data structure selection
Algorithm Design	20	Designs efficient, logically sound, and well-structured algorithm	Algorithm is correct with minor inefficiencies	Algorithm is partially correct or lacks clarity	Algorithm is incorrect or missing
Accuracy of Solution	30	Error-free, well-structured, optimized code/solution	Minor errors but overall functional	Multiple errors; partially working	Non-functional or missing solution
Clarity	10	Exceptionally clear, well-organized, uses diagrams effectively	Clear and organized with minor issues	Somewhat organized but lacks clarity	Poorly organized and unclear
